Deployment and Installation Instructions for VARK Learning

Installation:

    a. Make sure you have Python3.7, Pip3 and FLASK installed on your computer
        i. Installation sites:
            1. Python3.7: https://www.python.org/downloads/
            2. Pip3: https://pip.pypa.io/en/stable/installation/
            3. FLASK: https://pypi.org/project/Flask/
    b. In the command line, go into the project directory and into project1 folder
    c. Install the modules listed in the requirements.txt file by doing "pip3 install <module name>"
        i. If missing modules error ever shows up, do this step again with the module name

Deployment:

    a. In the Project1 folder, create virtual environment by this command: "virtualenv -p python3.7 venv" (do this once, don't have to do this every time you run)
    b. Activate virtual environment: "source venv/bin/activate"
    c. Now the Flask commands: "export FLASK_APP=application.py"
    d. Run: "python -m flask run"
    e. Copy the url "http://127.0.0.1:5000/" given on the command line into your browser to see the application
